Subject: Notification for Unifying DIP Switch Part Numbers

Dear Valued Customers,

In line with our core value to continuously improve our products and systems, CTS has implemented SAP as a new ERP system for managing multiple aspects of engineering, manufacturing and accounting. Implementation of SAP requires standardization of our model number assignments.

In the past, there have been many part number formats used and recognized by our old ERP system for our DIP switch product. We previously used a manual process to compensate for the various part number formats. Beginning January 1, 2019, with implementation of SAP, our part numbers must be unified and consistent with the part numbering found on our data sheets.

This notification addresses part numbers for DIP switches that are affected by implementation of SAP that include product series 193, 194, 195, 204, 206, 208, 206RA, 209, 210, 219, and 218. Part numbers using "00," "OFF," "-F," or "-P" will no longer be used by our ERP system or on our documentation. Existing affected part numbers will be assigned new part numbers that coincide with the associated data sheet. This change only affects the part numbering and does not affect the availability of the part numbers being offered. A reference list is attached for crosses from the old part number to the new part number. For additional information, please see the data sheets at the following website at: https://www.ctscorp.com/sense_product_line/dip-switches/
