Description of change	<p>Digi XBee® 3 (Zigbee, 802.15.4, and DigiMesh variants) Firmware version x00B has been released and is available on the Digi support site. The new firmware includes the following new features and enhancements:</p> <ul style="list-style-type: none"> Functions have been added to the XBee module in MicroPython that enable MicroPython applications to do the following: <ul style="list-style-type: none"> Respond to modem status messages generated by the module Register a callback to handle incoming RF packets A function has been added to the BLE module in MicroPython which allows XBees to connect to other XBees via Bluetooth A MicroPython module has been added that allows hardware accelerated AES encryption/decryption in user applications Numerous sleep mode enhancements for improved power savings <ul style="list-style-type: none"> “Sleep Immediate (SI)” command (DigiMesh x300B) was added to allow synchronously sleeping networks to save battery life by putting the whole network to sleep before OW time expires. This gives flexibility to save significant battery life in a network that may infrequently need a long wake time. The sleep_now () function (Zigbee, 802.15.4), when using the pin wake option, will now sleep regardless of the current state of the SLEEP_RQ line. The function can also be used to go to sleep without setting a timeout, which consumes less power than sleeping with a timeout. When using pin wake, the SLEEP_RQ line will only wake the radio on a falling edge, which allows the module to sleep when a one-shot pulse is used for wakeup. A function has been added to MicroPython that allows modules to put the radio in an idle state when RF receptions are not needed in order to further reduce power consumption Over-voltage detection feature enhancements Bug fixes <p>Find release notes, user manuals, and firmware downloads on the product support pages for more details:</p> <ul style="list-style-type: none"> Zigbee 100B release notes: https://ftp1.digi.com/support/firmware/release_notes/XB3-24Z/93001300_L.pdf

Recommended Action	<p>Digi recommends that customers update all revisions of Digi XBees that are older than those listed in this PCN to the latest available firmware. Firmware releases are available by automatic updates in Digi XBee Configuration and Test Utility (XCTU) via Digi's FTP site (How to Update XBee Firmware Via XCTU, XCTU User Guide) and through the Digi Support page. Digi XCTU may be downloaded here. XCTU should be updated to latest version prior to updating Digi XBee modules. Updates may also be applied with the Digi Multi Programmer. Refer to the release notes for update best practices and considerations. New product revisions that ship with updated software are provided in the table below.</p> <p>Digi XBee® Mobile applications are available in the Apple App Store for iOS and Play Store for Android.</p> <p>If you have questions about this notice please contact your sales representative or the Digi Technical Support Department via email at tech.support@digi.com.</p>
